

# 系统 pop 手势失效

1. 简介：系统默认页面左侧边缘滑动会触发 pop 逻辑，但是有时候可能不太灵敏，或者我们希望随便怎么侧滑都能触发这个 pop 逻辑，这就需要对自定义一个 pan 手势进行处理。
2. 解决：viewDidLoad 添加

```
id target = self.navigationController.navigationController.interactivePopGestureRecognizer.delegate;
UIPanGestureRecognizer *pan = [[UIPanGestureRecognizer alloc] initWithTarget:target action:@selector(handleNavigationTransition)];
[self.view addGestureRecognizer:pan];
self.navigationController.navigationController.interactivePopGestureRecognizer.enabled = NO;
// Do any additional setup after loading the view.
}

- (void)handleNavigationTransition:(UIPanGestureRecognizer *)gesture {};
```
