友盟社区化组件 v6.1.1

sdk 介绍与集成

- 1. 简述: 友盟社区化组件提供第三方授权登录和第三方分享功能。
- 2. 手动集成:
 - (1) 下载 U-Share SDK, 目录如下:

1. Document - U-Share SDK文档

2. UMSocialDemo - U-Share SDK Demo (如点选下载)

3. UMSocial - U-Share SDK核心目录

UMSocialSDK - U-Share SDK核心framework

UMSocialUI – U-Share 分享UI资源、分享面板framework SocialLibraries – 所选择下载的第三方平台SDK及U-Share链接库

- (2) 将 U-Share SDK 的核心目录添加到工程
- (3)添加项目配置: Other Linker Flags添加-ObjC
- (4) 加入依赖系统库 libsglite3. tbd

根据集成的不同平台加入相关的依赖库,未列出平台则不用添加添加方式:选中项目Target -> Linked Frameworks and Libraries列表中添加

平台	依赖系统库	
新浪微博	SystemConfiguration.framework CoreTelephony.framework ImageIO.framework libsqlite3.tbd libz.tbd	
微信	SystemConfiguration.framework CoreTelephony.framework libsqlite3.tbd libc++.tbd libz.tbd	
QQ	SystemConfiguration.framework libc++.tbd	
Twitter	CoreData.framework	

注: Twitter平台加入后需添加TwitterKit.framework/Resources/TwitterKitResources.bundle。

3. 通过 Cocoapods 集成

工程 target 名为 UMSocial Demo,则示例如下:

1.2.2 微信、微博及QQ集成示例

若需集成微信、微博和QQ平台、可用以下Podfile配置

```
target 'UMSocialDemo' do
# U-Share SDK UI模块 (分享面板,建议添加)
pod 'UMengUShare/UI'

# 集成新浪微博
pod 'UMengUShare/Social/Sina'

# 集成微信
pod 'UMengUShare/Social/WeChat'

# 集成QQ
pod 'UMengUShare/Social/QQ'
end
```

1.2.3 其他

若需要添加所有平台,只需添加以下代码:

```
target 'UMSocialDemo' do
pod 'UMengUShare/Social
end
```

添加所有平台会增加应用体积,不建议使用,可用于测试

1.2.4 从6.0版更新到6.1报错提示

如有编译错误, 如

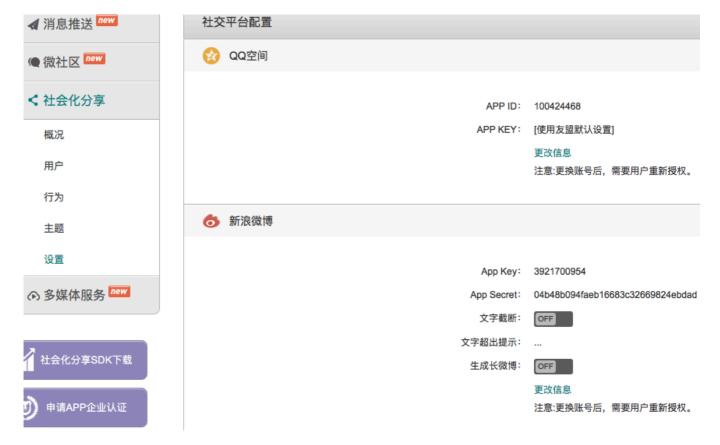

```
Incompatible block pointer types sending 'int ((^)(void))' to parameter of type 'UMS
ocialSharePlatformSelectionBlock' (aka 'void (^)(UMSocialPlatformType, NSDictionary
*__strong)')
```

则说明回调block类型有改动、修改成以下代码即可

```
[UMSocialUIManager showShareMenuViewInWindowWithPlatformSelectionBlock:^(UMSocialPla
tformType platformType, NSDictionary *userInfo) {
    // code
}];
```

4. U-Share SDK 平台配置

(1) 需要第三方 appKey 和 appSecret 等信息,可参考第三方账号申请及绑定申请所需的平台账号,绑定第三方帐号信息到友盟后台

(2)添加 URL Types

- 1) URL Scheme 是通过系统找到并跳转对应 app 的一类设置,通过向项目中的 info. plist 文件中加入 URL types 可使用第三方平台所注册的 appkey 信息向 系统注册你的 app,当跳转到第三方应用授权或分享后,可直接跳转回你的 app。
- 2)添加 URL Types 有如下几处,都可进行设置

1. 通过工程设置面板

2. 通过info.plist文件编辑

3. 直接编辑info.plist中XML代码

3) 配置第三方平台 URL Scheme

未列出则不需设置

平台	格式	举例	备注	
微信	微信appKey	wxdc1e388c3822c80b		
QQ/Qzone	以下两项都需添加: 1、"tencent"+腾讯QQ互联应 用appID 2、"QQ"+腾讯QQ互联应用 appID转换成十六进制(不足8 位前面补0)	appID: 100424468 1、tencent100424468 2、QQ05fc5b14	100424468 转十六进 制为 5fc5b14, 因不 足8位向前补0,结果 为 05fc5b14, 加 "QQ" 前 缀 QQ05fc5b14	
新浪微博	"wb"+新浪appKey	wb3921700954		
钉钉	钉钉appkey	dingoalmlnohc0wggfedpk	URL Type 中 的 identifier填"dingtalk"	
支付宝	"ap"+appID	ap2015111700822536	URL Type 中 的 identifier 填"alipayShare"	
易信	易信appkey	yx35664bdff4db42c2b7be1e29390c1a06		
点点虫	点点虫appID	8112117817424282305	URL Type 中 的 identifier填"Laiwang"	

(3) 适配 ios9/10

1) 以 i 0S10 SDK 编译的工程会默认以 SSL 安全协议进行网络传输,即 HTTPS,如果依然使用 HTTP 协议请求网络会报系统异常并中断请求。目前可用如下两种方式保持用 HTTP 进行网络连接: (详细域名白名单见官方集成文档)

以iOS10 SDK编译的工程会默认以SSL安全协议进行网络传输,即HTTPS,如果依然使用HTTP协议请求网络会报系统异常并中断请求。目前可用如下两种方式保持用HTTP进行网络连接:

在info.plist中加入安全域名白名单(右键info.plist用source code打开)

```
<key>NSAppTransportSecurity</key>
<dict>
  <!-- 配置允许 http的任意网络Begin-->
   <key>NSAllowsArbitraryLoads</key>
   <true/>
   <!-- 配置允许 http的任意网络End-->
  <key>NSExceptionDomains</key>
  <dict>
      <!-- U-Share必须配置的HTTP白名单-->
      <key>log.umsns.com</key>
      <dict>
          <key>NSIncludesSubdomains</key>
          <true/>
          <key>NSTemporaryExceptionAllowsInsecureHTTPLoads</key>
          <key>NSTemporaryExceptionMinimumTLSVersion</key>
          <string>TLSv1.1</string>
      </dict>
```

2) 应用跳转白名单

如果你的应用使用了如 SSO 授权登录或跳转分享功能,在 iOS9/10 下就需要增加一个可跳转的白名单,指定对应跳转 App 的 URL Scheme,否则将在第三方平台判断是否跳转时用到的 canOpenURL 时返回 NO,进而只进行 webview 授权或授权/分享失败。同样在 info. plist 增加:

```
<key>LSApplicationQueriesSchemes</key>
<array>
    <!-- 微信 URL Scheme 白名单-->
    <string>wechat</string>
    <string>weixin</string>

<!-- 新浪微博 URL Scheme 白名单-->
    <string>sinaweibohd</string>
    <string>sinaweibo</string>
    <string>sinaweiboso</string>
    <string>sinaweibosdk</string>
    <string>weibosdk</string>
    <string>weibosdk</string>
    <string>weibosdk</string>
```

```
<!-- QQ、Qzone URL Scheme 白名单-->
<string>mqqapi</string>
<string>mqq</string>
<string>mqqOpensdkSSoLogin</string>
<string>mqqconnect</string>
<string>mgqopensdkdataline</string>
<string>mqqopensdkgrouptribeshare</string>
<string>mqqopensdkfriend</string>
<string>mqqopensdkapi</string>
<string>mqqopensdkapiV2</string>
<string>mqqopensdkapiV3</string>
<string>mqqopensdkapiV4</string>
<string>mqzoneopensdk</string>
<string>wtloginmqq</string>
<string>wtloginmqq2</string>
<string>mqqwpa</string>
<string>mqzone</string>
<string>mqzonev2</string>
<string>mqzoneshare</string>
<string>wtlogingzone</string>
<string>mgzonewx</string>
<string>mqzoneopensdkapiV2</string>
<string>mqzoneopensdkapi19</string>
<string>mqzoneopensdkapi</string>
<string>mqqbrowser</string>
<string>mttbrowser</string>
```

5. 初始化设置

(1) 初始化 U-Share 及第三方平台

app启动后进行U-Share和第三方平台的初始化工作

```
//打开调试日志
    [[UMSocialManager defaultManager] openLog:YES];
   //设置友盟appkey
    [[UMSocialManager defaultManager] setUmSocialAppkey:@"57b432afe0f55a9832001a0a"]
   // 获取友盟social版本号
   //NSLog(@"UMeng social version: %@", [UMSocialGlobal umSocialSDKVersion]);
   //设置微信的appKey和appSecret
    [[UMSocialManager defaultManager] setPlaform:UMSocialPlatformType_WechatSession
appKey:@"wxdc1e388c3822c80b" appSecret:@"3baf1193c85774b3fd9d18447d76cab0"
redirectURL:@"http://mobile.umeng.com/social"];
   //设置分享到QQ互联的appKey和appSecret
     [[UMSocialManager defaultManager] setPlaform:UMSocialPlatformType QQ appKey:@"1
00424468" appSecret:nil redirectURL:@"http://mobile.umeng.com/social"];
    //设置新浪的appKey和appSecret
    [[UMSocialManager defaultManager] setPlaform:UMSocialPlatformType_Sina appKey:@"
3921700954" appSecret:@"04b48b094faeb16683c32669824ebdad" redirectURL:@"http://sns.
whalecloud.com/sina2/callback"];
   //支付宝的appKey
    [[UMSocialManager defaultManager] setPlaform: UMSocialPlatformType_AlipaySession
appKey:@"2015111700822536" appSecret:nil redirectURL:@"http://mobile.umeng.com/socia
l"];
```

(2) 设置系统回调

```
// 支持所有iOS系统
- (BOOL)application:(UIApplication *)application openURL:(NSURL *)url sourceApplication:(NSString *)sourceApplication annotation:(id)annotation
{

BOOL result = [[UMSocialManager defaultManager] handleOpenURL:url];
    if (!result) {
        // 其他如支付等SDK的回调
    }
    return result;
}
```

注:以上为建议使用的系统 openURL 回调,且**新浪**平台仅支持以上回调。还有以下两种回调方式,如果开发者选取以下回调,也请补充相应的函数调用。

1. 仅支持iOS9以上系统、iOS8及以下系统不会回调

```
- (BOOL)application:(UIApplication *)app openURL:(NSURL *)url options:(NSDictionary<
UIApplicationOpenURLOptionsKey, id> *)options
{

BOOL result = [[UMSocialManager defaultManager] handleOpenURL:url];
    if (!result) {
        // 其他如支付等SDK的回调
    }
    return result;
}
```

2.支持目前所有iOS系统

```
- (BOOL)application:(UIApplication *)application handleOpenURL:(NSURL *)url {
    BOOL result = [[UMSocialManager defaultManager] handleOpenURL:url];
    if (!result) {
        // 其他如支付等SDK的回调
    }
    return result;
}
```

sdk 具体接口调用

(1) 第三方平台授权

3.2.1 支持授权的平台

微信、QQ、新浪微博、腾讯微博、人人网、豆瓣、Facebook、Twitter、Linkedin领英、Kakao。

3.2.2 授权并获取用户信息

```
// 在需要进行获取用户信息的UIViewController中加入如下代码
#import <UMSocialCore/UMSocialCore.h>

    - (void)getUserInfoForPlatform:(UMSocialPlatformType)platformType

    [[UMSocialManager defaultManager] getUserInfoWithPlatform:platformType currentVi
ewController:self completion:^(id result, NSError *error) {
        UMSocialUserInfoResponse *userinfo =result;
       NSString *message = [NSString stringWithFormat:@"name: %@\n icon: %@\n gende
r: %@\n", userinfo.name, userinfo.iconurl, userinfo.gender];
       UIAlertView *alert = [[UIAlertView alloc] initWithTitle:@"UserInfo"
                                                        message:message
                                                       delegate:nil
                                              cancelButtonTitle:NSLocalizedString(@"
确定", nil)
                                              otherButtonTitles:nil];
        [alert show];
   }];
}
```

(2) 第三方平台分享

1) 弹出分享面板

```
#import "UMSocialUIManager.h"

//点击分享按钮

- (IBAction)share:(id)sender {
    __weak typeof(self) weakSelf = self;
    //显示分享面板
    [UMSocialUIManager showShareMenuViewInView:nil
sharePlatformSelectionBlock:^(UMSocialShareSelectionView *shareSelectionView, NSInde
xPath *indexPath, UMSocialPlatformType platformType) {
    // 根据platformType调用相关平台进行分享
    }];
}
```

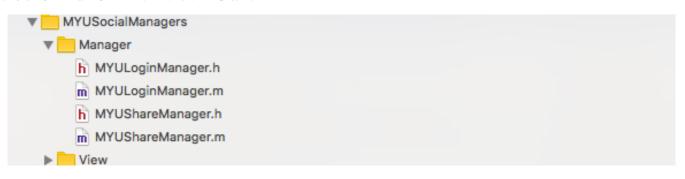

为避免应用审核被拒,仅会对有效的平台进行显示,如平台应用未安装,或平台应用不支持等会进行隐藏。由于以上原因,在模拟器上部分平台会隐藏。

2) 设置分享内容

3.3.2.1 分享文本

其他分享类型示例请参考U-Share API文档。

(3) 分享和授权登录封装和使用

1) MYULoginManager

```
#import <Foundation/Foundation.h>
#import <UMSocialCore/UMSocialCore.h>
@interface MYULoginManager: NSObject
 * 获取单例对象
 + (id)defaultManager;
 * 授权状态判断
 *@param platform 平台
- (BOOL)isAuth:(UMSocialPlatformType)platformType;
* 授权操作
* @note 在isAuth: 返回 NO时进行
 *@param platform 平台
 *@param currentVC 授权操作所在页面,只对sms,email等平台需要传入viewcontroller的平台,其他不需要的平台可以传入nil
 *@param completion 授权结果的回调,含uid, token等信息
- (void) authWithPlatform: (UMSocialPlatformType) platformType \ currentVC: (UIViewController*) controller \ *controller \ completion: (void)* (UMSocialAuthResponse*result, NSError*) controller* (VOID)* (UNSocialPlatformType) platformType \ currentVC: (UIViewController*) controller* (VOID)* (UMSocialPlatformType) platformType \ *controller* (VOID)* (UIViewController*) controller* (VOID)* (UMSocialPlatformType) platformType \ currentVC: (UIViewController*) controller* (VOID)* (UMSocialPlatformType) platformType \ *controller* (VOID)* (UIViewController*) controller* (VOID)* (UMSocialPlatformType) platformType \ currentVC: (UIViewController*) controller* (VOID)* (UMSocialPlatformType) platformType \ *controller* (VOID)* (UVSocialPlatformType) platformType \ *controller* (VOID)* (VOID)*
        error))completion;
*取消授权操作
* @note 在isAuth: 返回 YES时进行
 *@param platform 平台
  *@param completion 取消授权结果的回调
- (void) cancel Auth With Platform: (UMSocial Platform Type) platform Type completion: (UMSocial Request Completion Handler) completion; (UMSocial Platform Type) platform Type (UMSocial Platform Type) platform Type) platform Type (UMSocial Platform Type) platform Type) platform Type (UMSocial Platform Type) platform Type) platform Type) platform Type (UMSocial Platform Type) p
* 获取用户信息
*@note 在授权后进行获取
 *@param platform 平台
 *@param currentVC 授权操作所在页面
 *@param completion 信息获取结果的回调
- (void) get User InfoWith Platform: (UMSocial Platform Type) platform Type current VC: (UIV iew Controller *) current View Controller completion: (void (^) iew Controller *) current View Controller (UMSocial Platform Type) platform Type (void (^) iew Controller *) current View Controller (UMSocial Platform Type) platform Type (void (^) iew Controller *) current View Controller (UMSocial Platform Type) platform Type (void (^) iew Controller *) current View Controller (UMSocial Platform Type) platform Type (void (^) iew Controller *) current View Controller (UMSocial Platform Type) platform Type (void (^) iew Controller *) current View Controller (UMSocial Platform Type) platform Type (void (^) iew Controller *) current View Controller (UMSocial Platform Type) platform Type (void (^) iew Controller *) current View Controller (Void (^) iew Controller *) current View Controller (Void (^) iew Controller (Void 
       (UMSocialUserInfoResponse *, NSError *error))completion;
 #import "MYULoginManager.h"
 static MYULoginManager *instance;
 @implementation MYULoginManager
  + (instancetype)allocWithZone:(struct _NSZone *)zone{
           static dispatch_once_t onceToken;
         dispatch_once(&onceToken, ^{
                   instance = [ \underline{super} \ allocWithZone: \underline{zone} ];
          });
         return instance;
 #pragma mark public methods
   + (id)defaultManager{
           static dispatch_once_t onceToken;
         dispatch_once(&onceToken, ^{
                   instance = [[MYULoginManager alloc] init];
          });
         return instance;
 - (BOOL) is Auth: (UMSocial Platform Type) platform Type \{
         return [[UMSocialDataManager defaultManager] isAuth:platformType];
```

```
- (void)authWithPlatform:(UMSocialPlatformType)platformType currentVC:(UIViewController *)controller completion:(void (*)(UMSocialAuthResponse *, NSError *))
                       [[UMSocialManager\ defaultManager]\ authWithPlatform:platformType\ currentViewController: controller\ completion: `(id\ result,\ NSError\ *error')\ \{(id\ result,\ NSError\ *e
                                       UMSocialAuthResponse *authresponse = result;
                                       if(completion){
                                                         completion(authresponse, error);
                 }];
   - (void) cancel Auth With Platform: (UMSocial Platform Type) platform Type completion: (UMSocial Request Completion Handler) completion (UMSocial Platform Type) platform Type (UMSocial Platform Type) platf
                   [[UMSocialManager\ defaultManager]\ cancel AuthWithPlatform: platformType\ completion: \verb|^(id\ result,\ NSError\ *error|)| \\
                                       if(completion){
                                                           completion(result, error);
                 }];
 - (void) getUserInfoWithPlatform: (UMSocialPlatformType) platformType currentVC: (UIViewController *) currentViewController completion: (void (^)) and (^) are the platform of the platform 
                   (UMSocialUserInfoResponse *, NSError *))completion{
                     [[UMSocialManager\ defaultManager]\ getUserInfoWithPlatform:platformType\ currentViewController: currentViewController completion: \verb|^(id\ result,\ NSError\ *error")\ formula in the platform for the platform of the platf
                                       UMSocialUserInfoResponse *userinfo = result;\\
                                       if(completion){
                                                       completion(userinfo, error);
                   }];
}
```

2) MYUShareManager

```
#import <Foundation/Foundation.h>
#import <UMSocialCore/UMSocialCore.h>

typedef void("MYUShareCompletionBlock)(id result, NSError *error);

@interface MYUShareManager : NSObject

/**
