根据 UIView 绘制出相应的 Image

1. 简述:

功能需求, 如将屏幕信息保存到相册、制作高斯模糊背景视图等。

2. 实现:

```
+ (UIImage *)captureView:(UIView *)theView{
    [theView layoutIfNeeded];
    CGRect rect = theView.bounds;
    UIGraphicsBeginImageContextWithOptions(rect.size, NO, 0.0f); //第二个参数是否完全不透明,第三个参数是缩放比例,为0后系统自动设置正确比例
    CGContextRef context = UIGraphicsGetCurrentContext();
    [theView.layer renderInContext:context];
    UIImage *image = UIGraphicsGetImageFromCurrentImageContext();
    UIGraphicsEndImageContext();
    return image;
}
```
