输入框部分文本模糊匹配

- 1. 简介:有时用户文本框中输入特殊字符串,需判断并拿去请求数据,比如用户输入文字包含股票代码,假如输入3-6个数字我们才进行股票模糊请求,如果不符合连续的3-6个数字就不发请求。
- 2. 实现:

```
- (void)viewDidLoad {
  [super viewDidLoad];
  [self test:@"123456789上海的344"];
  // Do any additional setup after loading the view, typically from a nib.
- (void)test:(NSString *)test{
  NSError *error = NULL;
  NSRegularExpression *regex = [NSRegularExpression regularExpressionWithPattern:@"^[0-9] {3,6}$| (?<![0-9])[0-9] {3,6}$"
     options:NSRegularExpressionCaseInsensitive error:&error];
  NSArray *result = [regex matchesInString:test options:NSMatchingReportCompletion range:NSMakeRange(0, test.length)];
  if (result) {
     [result enumerateObjectsUsingBlock:^(NSTextCheckingResult* _Nonnull obj, NSUInteger idx, BOOL * _Nonnull stop) {
       if (idx==result.count-1) {
         NSLog(@"3----%@",[test substringWithRange:obj.range]);
       }
    }];
  }
```
