phpMyAdmin 站点配置

1. 简介：phpMyAdmin：可视化数据库管理系统，比命令行更直观、方便的进行数据库管理的工具
2. 站点搭建步骤
   (1) 解压phpMyAdmin项目目录至指定目录(站点文件)
   (2) 在apache的vhost(虚拟主机配置文件)httpd_vhost中添加一个站点
   (3) 找到php.ini 打开模块phpmbstring.dll
   (4) 浏览器浏览该站点即可

   注：phpmyadmin只能作为一个辅助工具，平时的数据库操作，还是以命令行为主

```
NameVirtualHost *:80

#
# VirtualHost example:
# Almost any Apache directive may go into a VirtualHost container.
# The first VirtualHost section is used for all requests that do not
# match a ServerName or ServerAlias in any <VirtualHost> block.
#
#默认站点
<VirtualHost *:80>
    ServerName localhost
    DocumentRoot "/Applications/MAMP/htdocs"
    <Directory "/Applications/MAMP/htdocs">
        Options Indexes
        Order Deny,Allow
        Allow From All
    </Directory>
</VirtualHost>

#股大师站点
<VirtualHost *:80>
    DocumentRoot "/Applications/MAMP/guDaShi"
    ServerName www.gudashi.com
    <Directory "/Applications/MAMP/guDaShi">
        Options Indexes
        Order Deny,Allow
        Allow From All
    </Directory>
</VirtualHost>

#phpMyAdmin站点
<VirtualHost *:80>
    DocumentRoot "/Applications/MAMP/bin/phpMyAdmin"
    ServerName www.phpmyadmin.com
    <Directory "/Applications/MAMP/bin/phpMyAdmin">
    Options Indexes
    Order Deny,Allow
    Allow From All
    DirectoryIndex index.php
    </Directory>
</VirtualHost>
```

补充：配置文件config.inc.php

当mysql数据库账户用户名密码变了后，需同步修改

密码设置：mysql解释器环境下，set password 'root'@'localhost' = password('newPass');
